

Restaurant Operations SOP

Fictional restaurant policy for an AI project demonstration.

Opening procedure

The shift supervisor checks kitchen cleanliness, equipment temperatures, staff attendance, and available stock before opening the branch.

Receiving supplies

Staff compare each delivery with the purchase order. They check quantity, packaging, and expiry dates. Damaged or expired items must be rejected and reported to the supervisor.

Food handling

Staff wash hands before handling food and after handling raw ingredients. Raw and ready-to-eat foods are prepared with separate equipment to reduce cross-contamination.

Order handover

Before handing over an order, staff verify the order number, items, packaging, and any special instructions.

Closing procedure

At closing, the supervisor checks the cash and card totals, records stock shortages, cleans work areas, and secures equipment and doors.
